CIRCULAR – REGARDING AI, CODING & ROBOTICS CLASSES

Dear Students and Parents,
Greetings from Krishnakulam School !!

We are excited to inform you that b with **STEM (Science, Technology, Engineering and Math)** to enrich our curriculum and equip our students with future-ready skills.

Starting this January, we have introduced **new elective classes on Coding, Artificial Intelligence (AI) and Robotics for students of Classes 5 to 12**. These classes will be held once in a week and will be taught by trained STEM instructors.

In Coding classes, students will learn programming languages like **Scratch, Python, Java** to develop creative computational skills. The AI course will give an introduction to **machine learning and neural networks**. And in Robotics classes, students will get **hands-on training in assembling and operating robots**.

These STEM skills are high in demand and integrating them into the curriculum will prepare our students to adapt to the technological advancements of the future. They align with the school's vision to nurture socially conscious leaders and innovators of tomorrow.

We encourage you to motivate your child to opt for these future-focused STEM electives. The introductory sessions will be held next week. Please get in touch with your child's class teacher for more details.

Let's together empower our next generation with both traditional academic rigor and cutting-edge technical abilities to evolve as leaders in this digital era.

With Warm Regards,
Principal
